Database Systems · Distributed Systems · Concurrency Control

EDUCATION

University at Buffalo, SUNY Sep 2024 - Present

Ph.D. in Computer Science and Engineering · Advisor: Prof. Haonan Lu

Tongji University Sep 2015 - Jul 2019

B.Eng. in Software Engineering

RESEARCH EXPERIENCE

Juicer: Proactive Ordering & Conflict Pacing Sep 2024 - Present

Research Software Engineer · Planned submission: OSDI 2027

- Characterizing abort causes across concurrency-control protocols: cross-shard order inversions and conflicts involving requests, control messages, and transaction semantics. Proposing a **horizontal approach** that enhances existing protocols through proactive ordering and conflict pacing.
- Prototyping **RPC-layer gRPC interceptors** for easy adoption across systems while retaining existing correctness mechanisms; evaluating CockroachDB and Spanner/NCC research implementations.

Lakehouse Concurrency Control Apr 2026 - Present

Research Software Engineer · Planned submission: OSDI 2027

- Investigating how commit conflicts trigger **full-statement retries**, wasting completed computation and S3 requests. Exploring early read/write intents and **incremental repair** to preserve unaffected outputs and make repair proportional to affected data.
- Prototyping Spark/Iceberg coordination and repair for restricted MERGE statements, validating against committed snapshots; using concurrent workloads and S3 tracing to assess correctness and wasted work.

INDUSTRY EXPERIENCE

Alibaba Group · Dataphin Aug 2019 - Jul 2022

Software Development Engineer II · Earlier internship: Jul 2018 - Jan 2019

- Built resource scheduling for **TB-scale memory resources**: implemented a Mesos framework and an asynchronous worker event loop/state machine; designed a subsequent Kubernetes-based scheduling solution.
- Led a **10-person cross-functional team** on a customer-tagging platform; translated tag configurations into dependent Hive/MaxCompute jobs and built SQL/UDF pipelines and materialized-view abstractions.
- Designed metadata discovery, RocketMQ-based delivery and search using Elasticsearch/PostgreSQL GIN indexes, with a unified interface for tables, columns, functions and workspaces.

Zhejiang Bujuan Tech Aug 2021 - Aug 2024

Co-founder

- Co-founded **Nie Le Ge Lian**, a WeChat mini-program community for creating and sharing original characters, artwork and stories.
- Built a data pipeline for client behavior, server logs and database records; designed collaborative-filtering training, online candidate retrieval and retrieval evaluation for content discovery.

TECHNICAL SKILLS

Languages: Java, Go, C++, Python, SQL
Data systems: Spark, Iceberg, Hive, Flink
Infrastructure: Kubernetes, AWS, Prometheus

Review draft
